Installation Guidelines

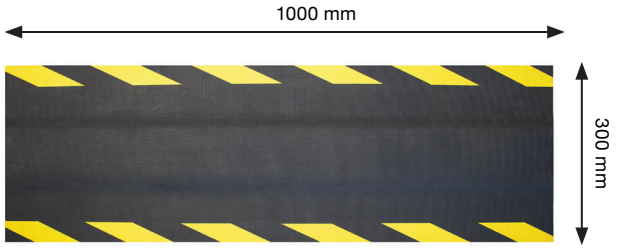
Cable Protection Mats
Rubber and Carpet

Equipment & Materials

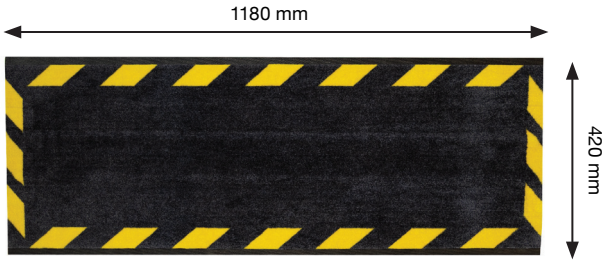
Equipment
- Clean Cloth
- Brush (Concrete floor only)
- Cleaning detergent (Concrete floor only)
- Hoover
- Safety Knife
- Degreasing solvent (Optional)
- Tape Measure (Optional)

Materials
- Cable Protection Mats
- Double sided tape adhesive (Permanent fixture only)

Superdry Contract



The full rubber version is for more heavy duty areas, such as warehouses.



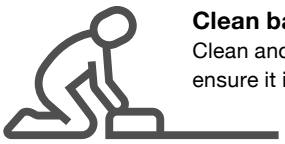
The carpet top surface is better suited to office environments.

All versions of these mats can be loosely laid and do not always require tape.
Tape is optional and can be provided on request.

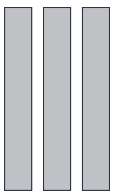
Preparation

For best results it is advised to install Cable Protection Mats on a level and clean floor. Simply follow these simple steps to achieve a durable, clean and adaptable flooring finish in your chosen area:

Degrease
Clean the existing floor if installing the Cable Protection Mat HD is to be installed on concrete, such as a warehouse floor, to ensure that it is grease and oil free and that the surface is clean and dry and free of dust and dirt.



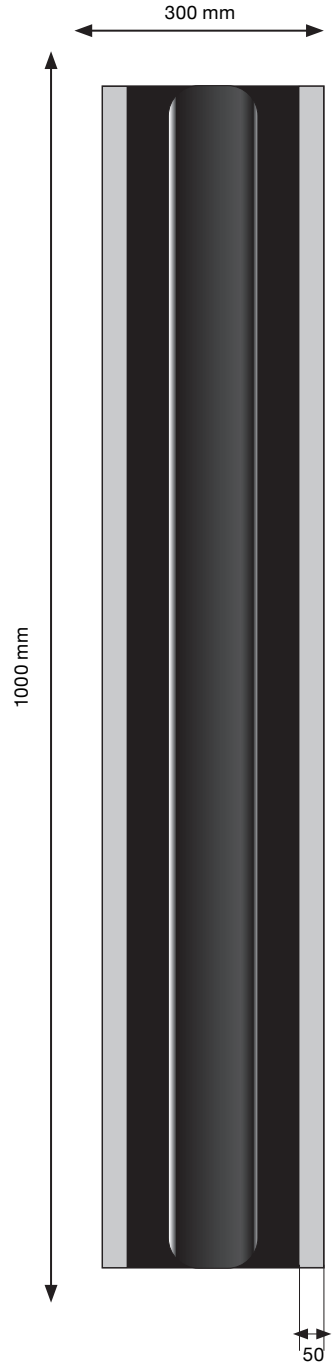
Clean back of mat
Clean and degrease the back of the mat and ensure it is free of dust and dirt.



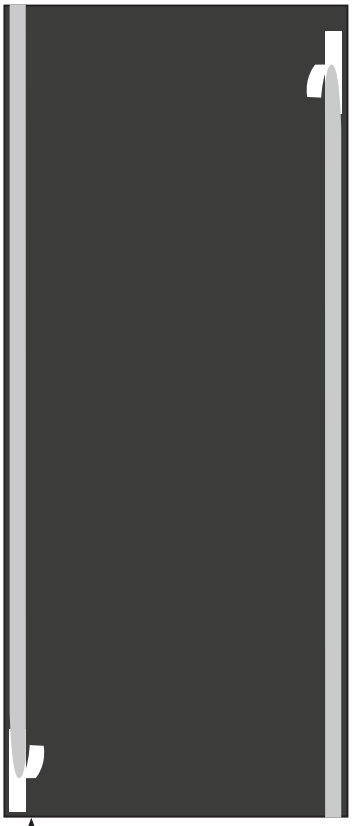
Double Sided Tape
Cut the tape into strips to fit the length of the matting. Peel off the backing from the tape and apply to the matting as detailed on the drawing below.

Application

1



Apply tape down the length of the mat and at least 2 strips on each length along the the long side for the full length of the mat. See image below.



Peel off the release paper

2

Two person finish - Only required on larger lengths of MP mats (CPM010002 & CPM010002C)

Once the tape is applied to the back of the mat, peel off the release paper. With two people carefully turn over the mat and apply the mat to the floor.

For singular mats repeat the process, but can be completed by 1 person.
*Always apply weight to the area that is taped to ensure adhered to the floor
